

Export Success in Fiji.

Patton Ltd is increasing its export sales and notably has recently supplied a purpose built water/glycol chiller unit to Fiji. The job was engineered at Patton for a local Fiji contracting company and is to be installed in a new boutique brewery.

Patton has maintained its assembly operations in Auckland and Christchurch while other suppliers have retrenched their operations to Australia or further afield.

Patton's ability to build custom systems and provide short lead times, together with a very strong engineering team, supports the sales team in today's competitive markets.

Patton equipment can be found in Australia, Pacific Islands, SE Asia, China, India, Middle East & South America.
